Appendix 5 QRG: wind-down scenarios and relevant management information

5.1 Generating wind-down scenarios and identifying relevant management information to monitor

- **App5.1.1 G** To generate wind-down scenarios, a *firm* may consider the following:
 - (1) which are the critical revenue drivers and business lines for the *firm* to sustain;
 - (2) which are the business areas subject to the greatest risks, e.g. if a sudden large volatility in the currency market will lead to great losses;
 - (3) the infrastructure, resources or third parties upon which the *firm* heavily depends;
 - (4) the *firm's* agreed (qualitative and quantitative) risk appetite and risk thresholds;
 - (5) internal audit reports; and
 - (6) compliance monitoring processes and reporting.
- App 5.1.2 G The above thinking will help a *firm* to find out its 'risk fault lines', i.e. those critical areas where *failure* would severely affect the business.
- App 5.1.3 G Based on the risk fault lines identified, a *firm* can decide the plausible scenario(s), i.e. the wind-down scenarios, under which its regulated business will likely no longer be viable. We give some examples in the table under WDPG App 5.1.4G.
- App 5.1.4 G After outlining the wind-down scenario(s), a *firm* identifies the key management information that is most directly related to those scenario(s) and the relevant indicators it will want to monitor for danger signs.

Effective Less effective

Sample wind-down scenarios (covering those that are fast and slow-moving, firm specific and macro-economic) might include:

The firm takes the view that the firm is running well and will never fail. Even if it were failing, it believes that it could sell the business

- •severe economic downturn leading to continual losses with no sign of recovery; and
- •loss of critical IT infrastructure (especially if the *firm's* business is largely technology-based).

Some management information which a *firm* could constantly monitor:

- profitability; and
- •net current and future cash-flow.

[Note: these are not definitive lists. Firms will need to analyse their business and work out their own scenarios.]

to another *firm* in short order or obtain generous *cash* infusions from a parent.

[Note: No business can categorically guarantee it will never fail. A failing business is not always able to find an acquirer/investor for the business and the process to effect due diligence and a change in control can be very lengthy.]
